What is Economics?

Economics is the study of how humans make choices under constraints. Those constraints are typically due to scarcity or tradeoffs, and usually take the form of budgets, prices, or input costs. In this class, we study the choices made by individuals and firms (that's the micro in microeconomics).

In this class, you will...

- Understand and be able to use microeconomic terminology
 - Understand that the highest-valued alternative foregone is the opportunity cost of what is chosen
 - Understand how individuals and firms make themselves as well off as possible in a world of scarcity
 - Understand how prices inform the decisions about which goods and services to produce, how to produce them, and who gets them
 - Understand how government policies and different institutional arrangements affect the allocation of resources in an economy
 - Use microeconomic principles to understand and explain economic events and other social phenomena
